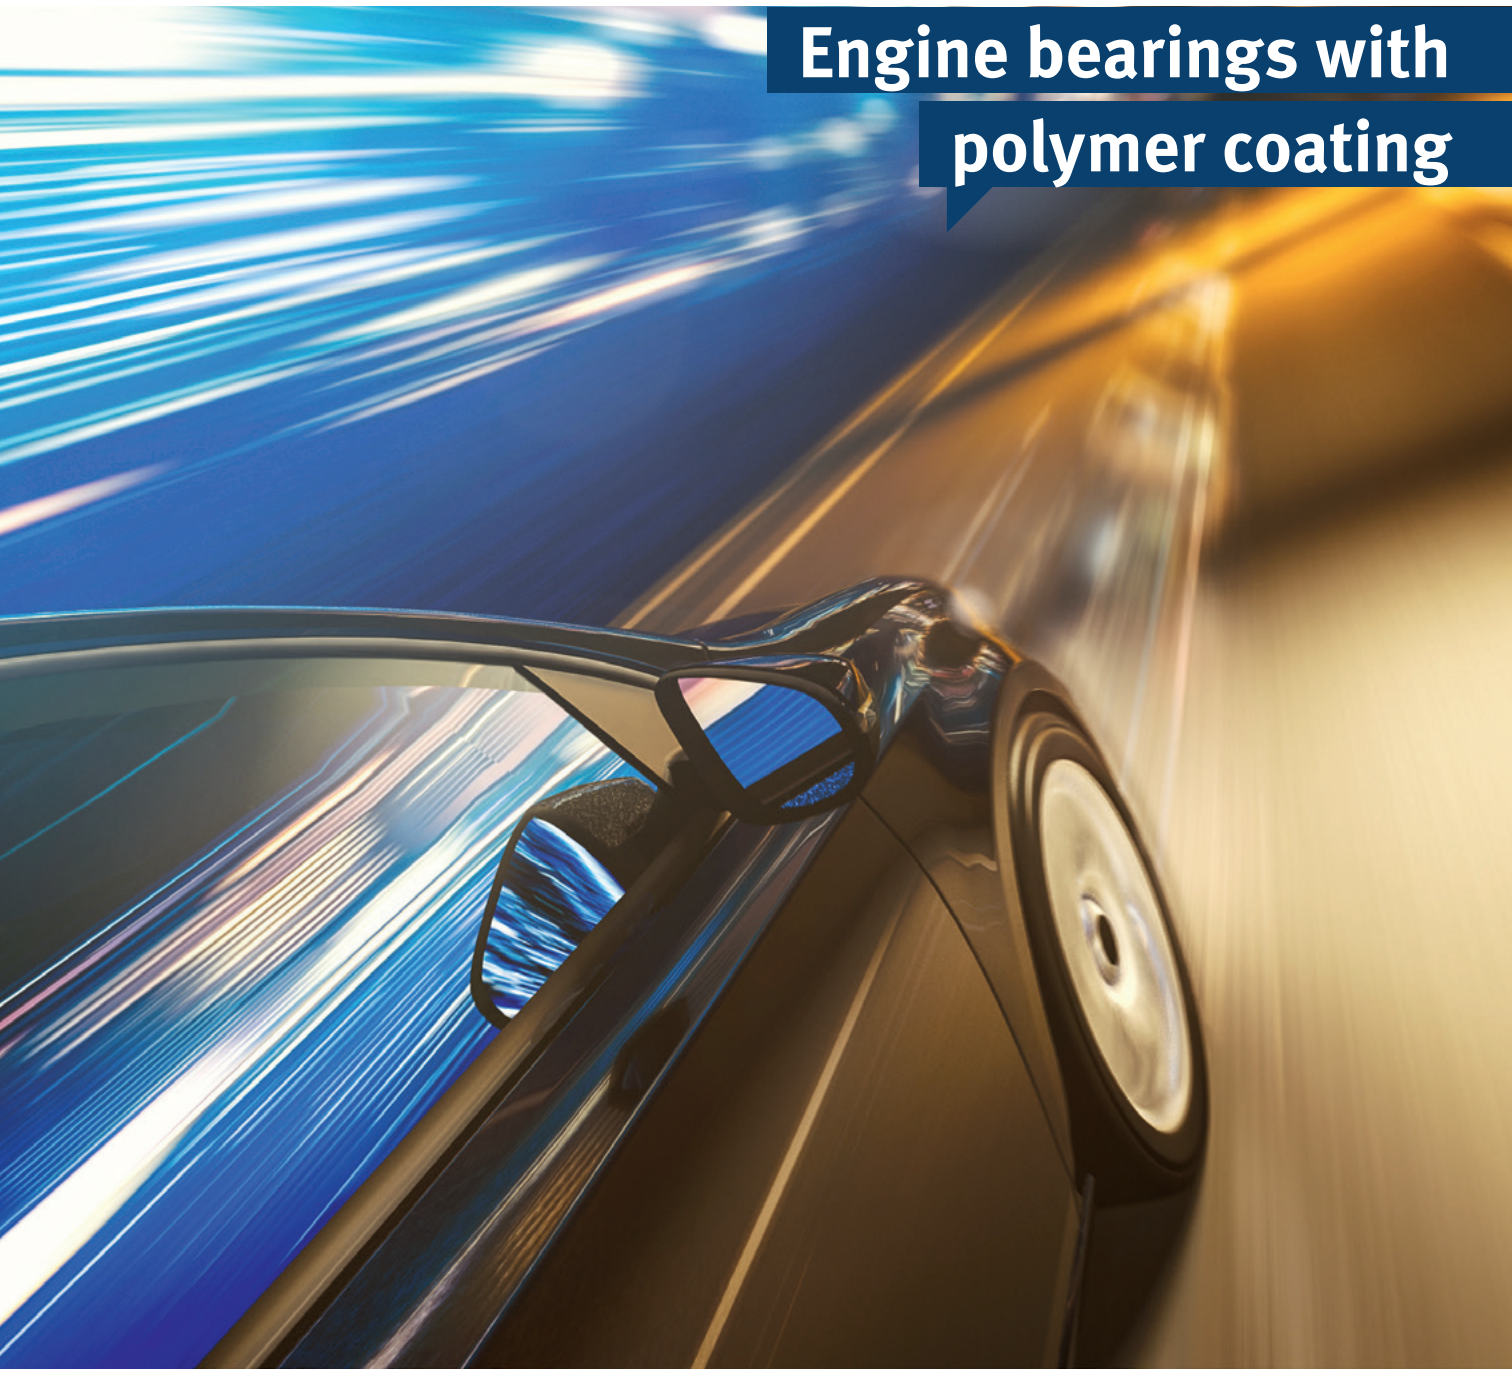
Engine bearings with polymer coating



Reduced friction, increased strength and wear resistance thanks to the new combination of metal and polymer.
Various technologies are being developed to reduce CO_2 emissions, such as start-stop or coasting operation. These types of engine operation require engine bearings with greater wear resistance. This is why the engine bearings have an additional polymer sliding layer. The bearing metal and polymer layer thus satisfy the conflicting requirements such as adaptability, wear resistance and simultaneous resilience.

OUR HEART BEATS FOR YOUR ENGINE.

Nous sommes certifiés selon ISO 9001 afin de prouver que notre gestion de la qualité satisfait aux exigences des normes internationales en vigueur.

Si, en dépit des contrôles effectués tout au long du processus de production et du rigoureux contrôle final, un défaut de matière ou de fabrication apparaît, nous prenons en charge, durant la période de prescription, soit la remise en état du moteur, soit le remplacement du produit défectueux. Les réclamations doivent nous parvenir par écrit dans un délai de 30 jours à compter de la date de survenue du dommage.
Le délai de prescription concernant la responsabilité pour vices matériels est de 12 mois à compter de la livraison des marchandises.
La responsabilité pour vices matériels ne s'applique pas si le produit livré a fait l'objet de modifications de la part d'un tiers ou en cas d'ajout de pièces d'origine tierce, à moins que le vice ne soit pas en rapport causal avec la modification. Cette responsabilité ne s'applique pas non plus quand les prescriptions en vigueur n'ont pas été respectées pour le maniement et le montage.
Notre garantie ne couvre pas l'usure normale et les détériorations dues à un maniement incorrect.

Менеджмент качества
В знак того, что наша система менеджмента качества соответствует требованиям специальных международных норм, мы прошли сертификацию ISO 9001.

Если, несмотря на проведение текущих проверок во время производственного процесса и тщательного заключительного контроля качества, все-таки возникнет дефект материала или изготовления, то мы, разумеется, берем на себя либо ремонт двигателя, либо замену рекламационного изделия в течение срока давности. Рекламации подобного рода необходимо направлять нам письменно в течение 30 дней после возникновения дефекта.
Срок давности в отношении претензий по качеству составляет 12 месяцев, считая с момента доставки товара. Претензии по качеству теряют силу, если поставленный продукт был изменен третьей стороной или за счет установки частей иного происхождения, за исключением случаев, когда дефект не имеет причинной связи с таким изменением. Кроме того, они теряют силу, если обращение и монтаж осуществлялись не в соответствии с действующей инструкцией.
Гарантия не распространяется на естественный износ и повреждение в результате неправильного обращения.

Экологический менеджмент
Ответственное использование природных ресурсов, защита окружающей среды и выполнение всех обязательств, предусмотренных при этом законом, составляют прочную основу для долгосрочного сотрудничества со всеми нашими партнерами. Эти причины побудили нашу организацию выполнить требования систем экологического менеджмента ISO 14001 и пройти сертификацию.

1. Подшипники скольжения

Массивные подшипники скольжения

Надежность и долгий срок службы

Эти втулки, изготовленные из специального сплава бронзы, используются прежде всего для шатунных подшипников и подшипников распределительного вала. Они отличаются высокой усталостной прочностью.

Биметаллические подшипники скольжения

Универсальность и высокое качество

Биметаллические подшипники скольжения Kolbenschmidt отличаются высокой износоустойчивостью и коррозионной стойкостью. Их устанавливают преимущественно в местах с низкой и средней нагрузкой.

Триметаллические подшипники скольжения

Выдерживают максимальное давление
Различные антифрикционные слои, наносимые в зависимости от места и вида применения, гарантируют долгий срок службы — даже в сложных условиях. Подшипники с гальваническим покрытием, ионно-плазменным напылением (sputter) или слоем лака скольжения устанавливают прежде всего в высоконагруженных двигателях. При этом они используются в основном в качестве коренных и шатунных подшипников.
